

The Most Complete Custom Course Materials Solution in Higher Education

INTRODUCING PROQUEST SIPX

An innovative tool for preparing, delivering and understanding your students' engagement in your assigned course readings.

Easy to use, and takes care of any readings you want to share with your students quickly and compliantly.

With a start button that can link from inside your LMS, as you select readings they can seamlessly appear in your LMS course page, or however you want to share with your students.

And our unique technology automatically recognizes and applies library subscription resources and open access content to save your students money!

A breed apart from traditional coursepack vendors:

- Students save an average of 20-35% off course materials because of scalable data connections into library resources
- Microtransaction technology has saved over 50% for schools with institution-pay models, by paying only for what students actually use
- Unbundles coursepacks to help students buy per reading and keep up in class, if they can't afford the whole coursepack up front
- Seamless LMS integration with individual reading links that match your design and organization of course reading assignments

Instantly see what cost and savings are created per student, right down to the cost of each individual reading.

Showcases the savings created by selecting library-licensed materials or open access content you were presented with in your search results.

Analytics on student engagement and ratings in your assigned readings (a view available only to you), to help you better prepare for class discussions. You also have a full custom analytics interface if you want more insights, and the library gets the complete campus picture of curriculum content needs that helps them invest in collections that can save your students even more money.

Lets you assign whatever readings or book chunks you want to use and protects the school's compliance—the only solution with in-system copyright tools with unique microtransaction technology that can save your department over 50% on permissions budgets if they pay for students' course materials, and give your students a way to purchase their readings unbundled if they have budget restrictions.

Reliable, consistent delivery through SIPX's URL technology—no more broken link complaints!
